

DCloud

DCloud is the DTI web platform that enables remote management of network-connected devices. Easily customizable and based on a microservices architecture, it offers **maximum communication security** and **real-time machine monitoring**.

Thanks to the system integration, it allows one-click management, maintenance, and diagnostics of the entire machine fleet.

HIGHLIGHTS

Remote software update

Alarms

Management Dashboard

Supported file formats (json, csv, sql)

Media management

User and Group Management

Maintenance

MQTT Protocol

Communication Security according to TLS standards

TECHNICAL FEATURES

- Reduced Time to Market
- Real-time machine status monitoring
- Communication security
- System access from PC and mobile
- Customizable platform based on specific requirements
- Remote machine software update
- Alarm management
